ArthroGreen Junior 140 g | 140 g

Manufacturer	ArthroGreen®
Product number	531
Weight	0.14kg
Length	67mm
Width	67mm
Height	119mm

Product description

ArthroGreen Junior is particularly suitable for growing animals to provide nutrition-related important building blocks for the joint structures and the musculoskeletal system during this elementary period of growth.

ArthroGreen Junior is characterized by its high vitamin C content. Vitamin C is an important factor for the release of the growth hormone in the body and must not be in short supply especially in the phase of maturation. Furthermore, vitamin C is of great importance for collagen biosynthesis and thus for the strength of bones and cartilage.

The glycosaminoglycans provided by the green-lipped mussel are a natural component of the synovia (synovial fluid) and thus provide important building blocks for naturally balanced growth. With the other ingredients, the whole is supplemented with almost 70% digestible protein, a high variety of vitamins, trace elements, minerals and amino acids that can create good conditions for young animals in growth.
