

cdVet Tape CBD

Manufacturer

Product number 1639

Product description

Tape bandage for animals

Elastic, self-adhesive tape bandage for supportive therapy for strains, sprains, bruises, etc.

The kinesiology tapes from **cdVet** have been specially developed for use on animals. They consist of an elastic cotton fabric with a skin-friendly adhesive based on rubber and enriched with high-quality plant extracts such as cannabidiol (CBD). This combination unites the physical benefits of kinesiology taping with the beneficial properties of natural plant extracts - optimally supporting the body's self-healing powers.

Composition: Backing material: 95% cotton, 5% elastane. Adhesive: rubber-based with CBD solution. No THC.

Application recommendation: Before use, the coat should be cleaned and free of grease. Remove the protective film. Apply the tape without stretching. Adhesive develops its adhesive effect through friction. The tape stays on the coat for approx. 1-2 days. **Tape size:** 5 cm x 5 m, 1 roll / package.

Store it cool, dry and protected from direct sunlight between 5-25°C.

Safety instructions:

- If there is an allergy to one of the ingredients, do not use the tape or test it on a small area of skin first
- Do not apply to open wounds and skin injuries
- Do not use for acute and chronic skin diseases (e.g. neurodermatitis in flare-ups, fungal infections)
- Only apply the tape to gestating bitches after consultation with the attending veterinarian
- Keep out of the reach of children
