Product description

Care product for dogs and cats

Hygienic agent for care and cleaning in the genital and teat area

For dogs, intimate care should also be taken into account, because especially in unneutered males and females, this area is often susceptible. Many male dog owners know the problem: spring begins, thus also the time of bitches in heat, and the males begin to drip yellowish from the foreskin. The latter may also indicate an inflammatory process.

In dogs and bitches, **Intimate Care** can contribute to the care and cleaning of the genital and teat area before and after mating, and in bitches after birth, respectively. **Intimate Care** is a care product without petrochemical ingredients, surfactants, colorants, fragrances, and preservatives, and is free of fat and oil.
