EquiGreen Hoof-Tonic 1 L | 1 l

Manufacturer	EquiGreen®
Product number	6009
Weight	0.985kg
Length	88mm
Width	88mm
Height	230mm

Product description

Hooves support the activity of blood circulation in the horse. The large surface of the hoof is accompanied by active blood circulation. With each step, the surface of the hooves expands, activating optimal blood circulation. Harmful substances and metabolic residues are excreted via the newly formed horn, which can be recognized by the rings or discolorations in the horn. Thus, the hoof with its corium is a vitally important and metabolically active organ. With a functioning hoof mechanism, the hoof metabolism is in balance. With restricted hoof mechanism, the blood accumulates and can no longer support the activity of the blood circulation in the body. With restricted hoof mechanism accompanied by reduced blood circulation, harmful substances and metabolic residues must be increasingly eliminated from the body via the liver and kidneys.

Frequent causes of imbalances in hoof metabolism are incorrect feeding, incorrect strain on the hooves, obesity, and metabolic diseases. EquiGreen Hoof-Tonic is specifically aligned towards the aromatic needs of horses and ponies in this context.
