privet HuminoMineral Pellets 1 kg | 1 kg

Manufacturer	priVet Farming®
Product number	1955
Weight	1kg
Length	99mm
Width	99mm
Height	222mm

Product description

privet HuminoMineral Pellets is a natural supplier of micronutrients consisting of sunflower seed expeller and the unique HuminoMin-Complex®. Sunflower seeds are naturally rich in essential amino acids, vitamins, minerals and trace elements. Particularly noteworthy is their high content of zinc and magnesium. They also contain a lot of folic acid as well as vitamin E, B vitamins, beta carotene, sulfur, potassium and selenium.

Special feature of the HuminoMin® complex: Intestinal health and environmental conditions also play a role that should not be underestimated when it comes to the absorption and utilization of the required micronutrients. This is where the HuminoMin® complex comes in: Due to its elaborate composition, the mucous membranes of the stomach and intestine are protected and supported in their function, which favors the absorption of necessary micronutrients.

Due to the high toxin-binding properties of the HuminoMin® complex, toxins are already bound in the intestine and excreted via the feces. This reduces the burden on the organism because the toxins do not enter the blood, and organs and tissues remain protected. In addition, the HuminoMin complex supports the regulation of acid-base balance and is characterized by excellent cell-protecting antioxidant properties.

HuminoMin® complex:
mucosal protection for stomach and intestine
toxin binding in the intestine
excellent feed conversion - micronutrients are better absorbed
cell protection through antioxidant properties
regulation of acid-base balance
support of the immune defense by balancing the lack of minerals
