dentaVet Anti-Plaque 50 g | 50 g

Manufacturer	dentaVet
Product number	1895
Weight	0.05kg
Length	45mm
Width	45mm
Height	70mm

Product description

Hardly anything has the potential to be as disturbing as unpleasant muzzle odor. In the long run, the human-animal relationship can be affected. Just as with us humans, plaque and tartar play a fundamental role in the oral and dental health of our beloved four-legged friends. A good and natural dental care for dogs and cats can be reflected in the overall animal health.

Ascophyllum nodosum - also known as knotted kelp - contains a special combination of trace elements and minerals, which we can use when our animals begin to develop plaque and tartar. The substances contained balance the body's own composition of saliva and can thus help to soften disturbing dental plaque. Softened plaques can then be removed excellently with dentaVet Anti-Plaque, as it distributes itself independently in the muzzle and a natural cleaning process is created by the natural friction substances. In addition, the adhesion of new plaque is impeded.

dentaVet Anti-Plaque can help to clean and care for the teeth and gums in a natural way with simple, daily application via the feed.
