CBD denta Gel 35 g | 35 g

Manufacturer	
Product number	1960
Weight	0.035kg
Length	40mm
Width	40mm
Height	49mm

Product description

CBD oil in dental care is becoming increasingly popular and can also with our pets be supportive to contribute to the dental health.

As an excellent alternative to the toothbrush, CBD denta Gel offers easy and effective application. The gel is only applied to the teeth. Through the subsequent reaction, licking with the tongue, brushing is done all by your pet alone. Thus, dental care becomes a stress-free routine. With regular use, the teeth are cleaned so gently, possibly adhering plaque dissolved, and protected from plaque.

CBD denta Gel contains natural care substances that promote optimal muzzle hygiene. Zeolite, like many mineral earths, can act as a purely natural filter. Its binding property harmonizes the muzzle flora by absorbing bacteria and acids. Due to the combination with Ascophyllum nodosum, the existing plaque is gently dissolved. The valuable essential oils of frankincense and fennel, penetrate deep into the muzzle cavity, unpleasant breath odor is reduced and the natural muzzle flora is supported.

Gum and tooth problems can not only be unpleasant, they also quickly wear on the nerves and stress our four-legged friends. CBD can also address this issue and promote inner peace with its calming and relaxing properties.

strengthens the muzzle flora, improves the muzzle hygiene and reduces the muzzle odor
sustainably strengthens the teeth and gums
dissolves plaque
soothes and relaxes

Dogs with MDR1 gene defect: There are no reliable studies on the tolerability of CBD products regarding dogs with MDR1 gene defect. We therefore recommend dentaVet Gel or dentaVet AntiPlaque Gel as alternatives.
