EquiGreen HuminoVet Granulate 1kg | 1 kg

Manufacturer	EquiGreen®
Product number	171
Weight	1kg
Length	99mm
Width	99mm
Height	222mm

Product description

The maximum ammonia concentration in the stable air is up to 30 cm above the litter. The load is very high, especially for mattress litter. If the horse sleeps or lies while lying, his sensitive respiratory tracts are exposed to the harmful gases. By applying EquiGreen HuminoVet Granulate the ammonia formation is inhibited and the presence of ammonia (e.g., urine) is bound. As a result, this damaging load is considerably reduced.Rot (aerobics) and putrefaction (anaerobic) are opposing decomposition processes of organic mass, such as manure. EquiGreen HuminoVet Granulate promotes aerobic rotting, which brings the following advantages:- healthy stable air- Reduction of germ pressure- rotting of manure- healthy, powerful animals
