

MortellaroVet Powder 25 kg | 25 kg

Manufacturer

Product number	534
Weight	25kg
Length	430mm
Width	200mm
Height	800mm

Product description

Special product (powder)

To support the reduction of Mortellaro breeding sites in the barn

The primary cause of Mortellaro is anaerobic decomposition (putrefaction) that occurs in manure and liquid manure. **MortellaroVet Powder** can accelerate decomposition (putrefaction) by initiating the composting process, which promotes aerobic decomposition. The germ-inhibiting substances commonly used to date, such as formaldehyde, have significant side effects. These negatively impact the stable's microbial flora, from the quality of the manure to soil life.

MortellaroVet Powder should be sprinkled on the running surfaces from time to time. This initiates the natural composting process, which helps prevent the formation of floating layers in the manure while simultaneously suppressing putrefactive and thus pathogenic bacteria, as well as putrefactive bacteria that promote Mortellaro.

MortellaroVet Powder, which is gentle on damaged hooves and skin without causing pain, can also be used to prepare a cloven hoof health bath, thereby creating a probiotic ambiance for the cloven hooves and in the barn. After cloven hoof care, the animals should walk through a cloven hoof bath containing **MortellaroVet Powder** so that the trimmed areas are well coated and a beneficial flora can establish itself on them. The animals carry the probiotic cloven hoof flora into the barn. This creates a probiotic ambiance around the cloven hooves. Even in the presence of contamination from feces and urine, the MortellaroVet cloven hoof health bath remains effective.

Expert tip: It is recommended to place the cloven hoof health bath behind the feeding station or at any location where a cloven hoof bath was previously installed. Thoroughly clean previously used cloven hoof baths with **BioClean** and then with **cdDes**!
