

feliTATZ GutFlora 50 ml | 50 ml

Manufacturer

Product number 1405

Weight 0.05kg

Length 36mm

Width 36mm

Height 95mm

Product description

Billions of tiny microorganisms are found in the intestine. A distinction is made between pathogenic bacteria and bacteria that are beneficial for healthy intestinal flora, as for example lactic acid bacteria. These 'good' bacteria are diligent helpers of the immune system and have a positive influence on the digestive juices, enzymes, and the intestinal mucosa.

If the natural intestinal flora is disturbed, excessive colonization by pathogenic agents may occur. Antibiotic administration, worming or feed changes/intolerances can, among other things, lead to disturbances of the intestinal flora. Probiotic microorganisms contained in fermented herbs can improve the intestinal flora. Therefore, regular feeding with feliTATZ GutFlora is recommended, even in the case of nutrition-related disturbances of the intestinal flora and digestion.

Displacement of pathogenic bacteria
Stimulation of the immune system
Improved digestion of food
Maintenance of intestinal peristalsis
