GutActive plus 100 ml | 100 ml

Manufacturer	
Product number	561
Weight	0.101kg
Length	47mm
Width	47mm
Height	103mm

Product description

The gut contains billions of microorganisms. A distinction is made between pathogenic bacteria (pathogens causing disease) and beneficial bacteria for the intestinal flora such lactic acid bacteria. These "good" bacteria are diligent helpers of the immune system and have a positive influence on the digestive juices, enzymes and intestinal mucosa. The pathogens are literally fought and displaced. In addition, an intact intestinal flora ensures good digestion.

1. Displacement of pathogenic bacteria
2. Stimulation of the immune system
3. Improved digestion of the food
4. Maintenance of intestinal peristalsis

If the natural intestinal flora is disturbed, it can lead to excessive colonization by pathogens and the dog gets diarrhea. Even antibiotic treatments can attack the protective function - often the medicaments do not distinguish between "good" and "bad" bacteria.
The intestinal flora is disturbed, their defense mechanism works only limited and the intestinal wall is affected.
The ancestor of our dog - the wolf - therefore also eats the digestive organs of its prey. They contain all the necessary microorganisms for a well-functioning intestinal flora. It is not always possible to feed fresh rumen or omasum. Even frozen, they do not compensate for the lack of valuable bacteria and enzymes, as they are destroyed by the frost. This

deficiency can be compensated very well with fermented herbs. Therefore, regular feeding with GutActive plus is recommended, even in the case of diet-related impaired intestinal flora as well as digestive problems.
