EquiGreen Sensitive Protein 10 kg | 10 kg

Manufacturer	EquiGreen®
Product number	2230
Weight	10kg
Length	120mm
Width	270mm
Height	610mm

Product description

Not all hay is the same In some years, hay quality often presents horse owners with a major challenge, and they do not always have the opportunity to change anything themselves. Especially in 2022, the hay quality in the analyses shows low values in the area of digestible crude protein and, in comparison, very high sugar values. Proteins are the building materials of the body. They are needed for daily renewal processes, muscle development and maintenance, and cell regeneration. Thus, a low-protein hay is a special challenge for all horses in active training, in the use of mating, in growth, for horses with an increased protein requirement due to muscle diseases, and for seniors. The high sugar levels, in turn, pose an increased risk for all metabolically sensitive horses. EquiGreen Sensitive Protein can have a positive influence on the insulin sensitivity of the cells and the blood sugar level. Valuable protein sources in the form of gently processed oil press expeller supply your horses with essential amino acids and provide important energy for the supply of muscles and body. In winter, EquiGreen Sensitive Protein can help to maintain the muscles and provide sufficient building materials for the constant renewal processes.
