MicroAgrar Poultry 25 kg | 25 kg

Manufacturer	cdVet Agrar
Product number	10006
Weight	25kg
Length	430mm
Width	200mm
Height	800mm

Product description

MicroAgrar Poultry support the weight gain through an optimised feed intake and feed conversion in the poultry fattening. If the Law of the Minimum is only insufficient implemented deficiencies in the animal nutrition can lead to income losses. On the other hand the whole metabolism of the animal can be stressed through an oversupply of synthetic additives and toxins (fungal toxins). To counteract problems in the beginning, for example reduced performance, established cdVet products were developed further to MicroAgrar Poultry. MicroAgrar Poultry provides an optimal daily supply of minerals, trace elements and vitamins which supports the physiological organ functions and metabolic processes. This is the precondition for a healthy life. What is important? - shell strength - stable laying performance - increased life expectancy - optimal conversion of minerals - binding of toxins - improved feed conversion by optimized cellular exchange of ions - improved feed tolerance and conversion of given feed (improved absorption of required substances, binding and excretion of unnecessary substances) - decreases of requirement of crude proteins due to a stimulation of the protein metabolism = economisation of protein carriers - improved air in the stable - optimized condition of joints and bone structure - improved mineral supply - control of the feed intake - higher feed efficiency
