Dragon's Blood 20 ml | 20 ml

Manufacturer	
Product number	1365
Weight	0.0214kg
Length	28mm
Width	28mm
Height	100mm

Product description

It sounds really martial: Dragon's Blood - Sangre de Drago. But the fantastic-sounding name has nothing in common with myths, legends, or mythical creatures. Croton lechleri - the Latin name of this rainforest tree - grows in the tropical Amazon regions of South America and its appearance is more reminiscent of an umbrella tree than a dragon. But the amazing thing about it is inside: If the bark is scratched or scraped, the eponymous, wine-red, slightly foamy sap oozes out, as if the tree would bleed. This means you can harvest from the same trees over and over again in a resource-saving way - no trees are felled for the harvest.

Anyone looking for the cell-protecting OPC has so far always ended up with grape seed extracts. The natural resin of the dragon tree with an OPC content of up to 90% is far ahead of them. The so-called oligomeric procyanidins are secondary plant substances from the group of polyphenols, which belong to the most effective natural antioxidants. The tree uses OPC for its own protection, to keep predators away and as natural weather and UV protection.

Also in the field of animal husbandry and daily interaction with our companions cdVet cdVet Dragons Blood can contribute its part to the natural supply in the field of skin health. Through the dragon blood a protective film is formed on the skin, which supports the skin in its self-healing and at the same time prevents dirt and bacteria from interfering with the healing. A high quality of dragon's blood can be recognized by the fact that the juice foams a little milky when rubbed on the skin of your favorite.
