feliTATZ WK-Mix 12 g | 12 g

Manufacturer	feliTATZ
Product number	1605
Weight	0.012kg
Length	35mm
Width	35mm
Height	58mm

Product description

feliTATZ WK-Mix has been developed for the special nutritional needs that arise in connection with colonization by worms. The lack of herbal ingredients, such as saponins, bitter substances, and tannins, can make our pets susceptible to excessive colonization by worms. In contrast to their conspecifics living in the wilderness, they often do not have the opportunity to absorb those substances through plants and herbs. However with their wild relatives, precisely these substances lead to avoid an excessive, pathological colonization by worms.

In order to have less often a reason for chemical deworming cures, the animal's intestine should therefore be supported with appropriate herbs that are contained in feliTATZ WK-Mix. Besides of a balanced diet, you can achieve this by the occasional addition of the complementary feed feliTATZ WK-Mix, which can compensate for the lack of herbal ingredients, such as saponins, bitter substances and tannins. In addition, many specialists for parasitology recommend checking the colonization by worms of the animal by regularly monitoring the faeces samples.
